## Summary

---

Software engineer focused on backend engineering, cloud systems, and scalable software. Hands-on experience building APIs, deploying AWS infrastructure, training ML systems, and solving real engineering problems end-to-end.

## Skills

---

**Languages:** Python, JavaScript, C++, SQL, Bash

**Backend:** Node.js, Express.js, REST APIs, Authentication, Databases

**Cloud:** AWS (EC2, RDS, S3, VPC, Load Balancer, EFS)

**Databases:** MySQL, MongoDB, PostgreSQL

**Tools:** Git, Linux, Docker, CI/CD

**CS Core:** DSA, OOP, DBMS, OS, Networks

## Projects

---

### Auto Mininet — AI Network Topology Generator

2025–Apr 2026

Next.js, TypeScript, Python, HuggingFace, MongoDB, Docker

- Built AI platform that converts prompts into runnable Mininet Python scripts using fine-tuned LLM.
- Trained open-source model on custom Mininet dataset for topology generation.
- Developed full-stack system with auth, chat history, admin panel, and code output UI.

### AWS 3-Tier Architecture

2026

AWS, VPC, EC2, RDS, Load Balancer

- Designed secure VPC with public/private subnet separation.
- Deployed EC2 app tier behind Load Balancer with RDS backend.
- Built scalable and fault-tolerant cloud architecture.

### Full Stack Web Application

2024

React/Vue.js, Node.js, SQL, MongoDB

- Built REST APIs, authentication, database models, and frontend integration.
- Improved backend performance and query efficiency.

## Experience

---

### Freelance Developer

2023–2025

- Built web applications, backend systems and social media automation bots for clients.
- Managed deployment, debugging, maintenance, and feature delivery.
- Worked independently with ownership and deadlines.

## Education

---

### FAST National University of Computer and Emerging Sciences (NUCES)

BS Computer Science

## Strengths

---

Strong ownership mindset, fast learner, analytical problem solver, adaptable, collaborative team player, comfortable working independently, and engineering-focused.
